Vivek is an ICREA professor and chair of the cell biology department at Barcelona CRG. One of the top traffic experts in the world, he has made fundamental contributions to the discovery of COPI vesicles and SNARE-mediated membrane fusion, and, more generally, to the understanding of Golgi structure and function. In the last decade, he has devoted considerable effort to the study of matrix secretion and the role of Tango1, a rare animal-specific secretory pathway component that his lab discovered in a Drosophila screening
